

Understanding the Rising Employee Attrition

The Situation

- Over the past year, employee departures increased noticeably across the organization.
- Operational efficiency began to decline.
- Teams experienced manpower shortages.
- Project timelines were affected.
- HR efforts shifted heavily toward continuous hiring.

Business Impact

- The increasing resignations were not just an HR issue they had financial and strategic consequences.
- Higher recruitment and training costs
- Loss of experienced employees
- Reduced team productivity
- Disruption in project continuity
- It became clear that attrition was affecting overall business stability.

The Key Questions

- To address the issue, leadership wanted data-backed answers to:
- Why are employees leaving?
- Which employee groups are more likely to resign?
- Are salary, job satisfaction, or work-life balance influencing attrition?
- How can we reduce attrition before it becomes a bigger risk?

Our Approach

- To analyze rising attrition at NextGen Systems, we structured our study in two stages:
- Executive Overview: Evaluated overall attrition trends, department impact, job roles, and overtime patterns.
- Workforce Deep Dive: Examined employee segments based on age, experience, income, satisfaction, and work-life balance, while also comparing salary positioning with competitor companies.
- The next slides present insights from this analysis.

Attrition Count by JobRole

Attrition Count by OverTime

What the Dashboard Shows

- The attrition rate is 16.1%, showing a noticeable level of employee turnover.
- Most exits are from R&D and Sales departments.
- Roles like Laboratory Technicians and Sales Executives show higher attrition.
- Employees working overtime are more likely to leave.
- Attrition is balanced across gender, suggesting role and workload are bigger factors.

What This Means for the Business

- Attrition is concentrated in high-pressure and critical roles.
- Workload and overtime may be contributing to employee stress.
- Focus on high-risk departments with targeted retention programs.
- Monitor and manage overtime to reduce burnout risk.
- Provide clearer career growth paths for operational roles.
- Review compensation and incentive structures in critical job roles.

Deep-Dive Analysis

HR Analytics Dashboard

What the Dashboard Shows

- Attrition is front-loaded in early tenure.
- Senior workforce remains highly stable.
- Engagement deficits strongly predict exits.
- Exits skew toward lower income bands.
- Pay is market-competitive overall.
- Issue points to effort-reward misalignment.
- Attrition is patterned and manageable.

What This Means for the Business

- Strengthen early-tenure onboarding
- Clarify fresher career paths
- Boost manager-led engagement
- Improve early pay progression
- Balance overtime workload
- Target high-risk entry roles
- Track attrition continuously
